Activity: Present Your Dream Digital Job

Description:Learnersresearchandpresenttheirfavoritedigitaljob from a curated list.

Objective: Promote research and presentation skills through digital career exploration.

Time: 45 - 60 minutes

Materials: presentation template, career information list, Careers in Digital Guide

Steps:

1. Look at the **Your Guide to Careers in Digital Infographic** to start a discussion on Careers in Digital. You can ask learners about reasons for choosing a digital career, what digital professions they know, and read through Infographic with students.

2. You need a curated list of digital jobs to facilitate presentations. You can create a list of digital careers using the **Careers in Digital Guide**.

3. Educators ask learners to pick one career in digital and research the profession. Learners can choose the same profession.

4. Each learner creates a **3-minute presentation** including the following information:
   - Job title
   - What does this person do?
   - Key skills needed
   - Why I chose this job (if not applied as a follow-up)
   - One interesting fact I learned
   - One expert from this profession and short information on the expert

5. Learners complete their 3-minute presentations in the classroom. In a large group setting, learners reflect on their presentations.

The educator can facilitate a conversation by asking,

"What would a person need to do now to achieve this career?",

"How would you become an expert in this profession?".

"Who can be other role models for this digital job?",

"Do you know any person in this profession?".
